

# Zoom Reflector

A classic among our Light Shaping Tools

The classic Zoom Reflector has served photographers all over the world for more than four decades. The new version retains all of the attractive features of the original but adds an integrated grid holder and even smoother and more precise light characteristics. The result is one of the most versatile reflectors available, capable of providing the light of a normal reflector, a wide-angle reflector and everything in between. Standard reflector for Pro Head Plus and Acute/D4 Heads.
