

Battery powered LED fixture

User's Manual

THELIGHT Luminary for cine and TV, S.L.

December 2011

INTRODUCTION

This guide provides information about how to use the product functions to illuminate with this equipment as well as warnings on his use.

The 4LIGHT is a product of professional use for interior locations or studio and must be operated only by qualified technical personnel.

To obtain the maximum features, please read the following operating instructions very carefully before using this fixture for the first time. Please keep these operating instructions for you and subsequent users to reference in the future.

THELIGHT Luminary for cine and TV, S.L.

Safety Precautions

For your own safety, please read and follow all safety instructions and warnings.

Exemption from Liability

THELIGHT Luminary for cinema and TV, S.L. does not assume any responsibility for lighting failures caused by malfunction of this product.

The manufacturer disclaims liability for any damage to persons or property caused by inappropriate operation, damage of this kind lies in the responsibility of the operator.

Warranty

This product is manufactured to local specifications and the warranty is valid within the country of purchase. Should the product fail or malfunction while you are abroad, the manufacturer assumes no responsibility for servicing the product locally or bearing the expenditure incurred thereof.

Marking

www.thelight.com.es

The total or partial reproduction of this guide is prohibited without the express written permission of THELIGHT. THELIGHT technology is protected under Spanish license laws with international patents pending.

Information and specifications in this document are subject to change without notice.

SAFETY PRECAUTIONS

Various symbols are used throughout this instruction manual and on the product to prevent physical harm to you or other people and damage to property. The symbols and their meanings are explained below.

Warning Possible risk of injury or damage to equipment

Danger This symbol indicates the risk of electric shock or fire danger that could result in injury or damage to equipment.

This equipment has been checked and meets the requirements of general safety for electronic devices. These requirements are specified to provide a reasonable protection against electromagnetic interferences when the equipment is used in commercial environments.

This equipment generates, uses and can emit waves of radio frequency, and if not properly used following the instructions of this manual can produce interferences in radio communications. The use of this equipment in residential areas can produce interference, the user will be the only responsible of correcting them.

CAUTION: Though the light generated by LED does not produce any heat, for what his use turns out to be very comfortable for the actors, the lamp head acts as a heat sink through its back part. Surface can reach a temperature between the 50 °C and the 80 °C. Please use protective gloves if you touch the lamp head at the heat sink.

Danger

Do not attempt to open any of the device or component housings. To reduce the risk of electric shock, do not remove lamp head or Control Unit cover. No user-serviceable parts inside. Maintenance and repair work to be carried out only by THELIGHT Service Centre.

Do not cover the aluminium lamp head heat sink while using it. Proper ventilation must be provided. Avoid exposing the lamp head to the heat radiation of other light fixtures.

The lamp head is equipped with high power LEDs. Due to their high light-output intensity don't stare directly into the light source.

The V-lock mount or the XLR4 receptacle can be used for powering the 4LIGHT by battery.

Warning

Relevant information on Battery use

Use only original chargers. Don't short the battery. Respect the service and the safety manual of the battery.

To ensure maximum performance of the 4LIGHT equipment use only high-load capacity batteries with a high continuous draw meaning a Discharge Current of at least 9A.

1. MAIN FEATURES

4LIGHT is an LED panel housing a total of 96 high power LED. It has been specially designed and its colorimetry calibrated for professional photography, cinematography and television industry use. 4LIGHT main innovative features are:

- Variable Colour Temperature
- Stable colour dimming
- Green/magenta bias control
- Very high light output
- Low power draw
- High CRI digitally calibrated light
- V-lock mount battery operated
- Lightweight lamp head

NOTE ABOUT MEASURING COLOUR TEMPERATURE (CCT)

4LIGHT incorporates the innovative THELIGHT technology based on high power LED triplets + Fresnel lens + CPU control software to obtain the wide range of calibrated colour temperatures combined with a high colour rendering index CCT.

We must remark that colour meters in use today are designed for a full spectrum source such as incandescent lights and therefore cannot be used to accurately read the correlated colour temperature (CCT) of the light emitted by THELIGHT and other LED light fixtures.

The eventual diversions to green display as CC10M or CC15M in hand-held colour meters are due to these unaccuracy on reading of the light emitted by LED and must not be considered.

THELIGHT guarantees pure white light and correct colorimetry of the light delivered by its high power LED luminaries which have been calibrated in laboratory according to CIE 13.3-1995 international standards for measurement of the CRI and chromatic coordinates (x, and CIE-1931).

The reliability of this digital equipment is supported by the calibration THELIGHT has made in laboratory by spectrophotometer, which precision is half-yearly calibrated according to the National Institute of Standards (NIST) of the United States and of the Physikalisch-Technische Bundesanstalt (PTB) of Germany.

In order that the advanced THELIGHT luminaries could be used together with other light sources, THELIGHT has accurately calibrated both the CCT and the chromatic coordinates to match them with traditional light sources following tungsten and daylight standards.

The digital Control Unit allows a further and precise green/magenta correction along the whole scale of colour temperatures.

2. COMPONENTS AND ACCESSORIES

Each 4LIGHT kit is composed by:

1 x 4LIGHT lamp head

1 x VDC Control Unit / VDC Control Unit DMX

1 x Quick link swivel-ball head with 3/8" pin

2 x Removable barn doors (available separately)

1 x 2,5 meters power cable

1 x 2,5 meters extension cable

1 x Hexagonal 5/8" [16mm] baby spud

1 x Quick link diffuser

3. NAMES AND PARTS

4LIGHT lamp head

Rear view

VDC Control Unit /VDC Control Unit DMX

Front view

- 1 Power switch
- 2 Colour temperature digital display
- 3 Intensity level digital display
- 4 Turbo status blue LED
- 5 Green/magenta offset status green LED
- 6 Power output
- 7 Colour temperature adjustment buttons
- 8 Intensity adjustment buttons
- 9 On/off turbo button
- 10 Green/magenta knob

Rear view VDC Control Unit

1. Fuse receptacle (1 x 15A)
2. XLR4 VDC input

Rear view VDC Control Unit DMX

1. Fuse receptacle (1 x 15A)
2. XLR DMX in
3. XLR4 VDC in
4. XLR DMX out

4. PLACING INTO OPERATION

1. Quick link swivel ball head mounting

Align the swivel ball head plate to the four rivets located at the back of the lamp head as shown in the picture.

Warning

On mounting the lamp head on any type of support, tripod or ceiling grid make sure the swivel ball head handle is facing down towards the ground.

Slide the swivel ball head plate until the four shoulder rivets drop into the receptacle. The locking pin will snap into place when the plate is properly seated.

Warning

Make sure the locking pin has totally entered in his housing before proceeding to use the light fixture.

The standard swivel ball head comes with a 3/8" pin to be clamped into a grip head and allows the lamp head to be oriented and locked in a broad range of angles.

Removing the quick link swivel ball head

Pull up on the locking pin and slide the swivel ball head plate until the four rivets get free. Extract the swivel ball head by pulling it upwards.

2. Connect a battery on the V-lock mount

Either the V-lock mount or the XLR4 receptacle can be used for powering the 4LIGHT by battery. Any battery from 9 to 36 V can be used.

Relevant information on Battery use

Use only original chargers. Don't short the battery. Respect the service and the safety manual of the battery.

XLR4 PINOUT
POWER CONNECTOR

When powering the 4LIGHT through the XLR4 connector located at the back of the VDC Control Unit check the proper polarity as shown in the picture at the Control Unit bottom.

To ensure maximum performance of the 4LIGHT equipment use only high-load capacity batteries with a high continuous draw meaning a Discharge Current of at least 9A..

NOTE: To power the 4LIGHT lamp head through mains power a power supply of at least 14A and 9 to 36V output must be used.

Danger

To avoid electric shocks and/or damages in the equipment the power switch located at the VDC Control Unit front panel must be off before connecting or disconnecting cables.

3. Connecting VDC Control Unit and lamp head through the extension cable

Connect the connector in the circular receptacle at the VDC Control Unit front panel.

Verify the correct alignment of the connectors before inserting them. Rotate the locking ring until it clicks into the lock position.

Connect the same way the other end of the extension cable in the input receptacle coming out from the lamp head.

Disconnecting the extension cable

Grab the connector firmly, turn the ring to unlock it and pull to extract it.

NOTE: The lamp heads can operate with a maximum extension cable length of 10 meters.

NOTE: The extension cable is provided with two equal connectors in every end: both can be connected either in the VDC Control Unit or in the lamp head.

NOTE: The 4LIGHT lamp head can be battery powered with the VDC Control Unit included in the kit or mains powered with the optional VAC Control Unit.

4. Placing the VDC Control Unit in the stand mast

You can place the VDC Control Unit in the stand mast for a handy use close to the lamp head. To do so you will need to use a regular Super Clamp (not included in the 4LIGHT kit) and insert the Hexagonal 5/8" (16mm) baby spud.

Once installed the hexagonal spud just slide the holder located at the VDC Control Unit bottom over the spud plate until properly seated, as shown in the picture.

5. Security cables

The lamp head is provided with several holes specially design to insert one or more 5mm snaps and their safety cable.

Warning

When the lamp head and any other component is mounted in a hanging position it must be secured with a safety cable rated at a minimum of ten times the weight of the light fixture including its accessories.

5. DIGITAL ADJUSTMENTS

The VDC Control Unit doubles as power supply and digital remote controller of the following light parameters through its programmed CPU:

- Calibrated Colour Temperature variation
- Stable colour dimming
- Green/magenta bias control

Turning the Power On/Off

Turn on the equipment by switching the power button towards the **I** position. Switch the power button towards **O** position to turn it off.

The light settings always remain stored when the VDC Control Unit is powered off.

Danger

Both the lamp head and the VDC Control Unit are electrically protected against power failures but to avoid possible electric shocks and/or equipment damages make sure the power switch located at the VDC Control Unit front panel will be off before connecting or disconnecting cables.

In case of extreme over tension replace the 15Ah fuse from inside the fuse holder located at VDC Control Unit back. (see picture on page 9)

NOTE:

If a power failure would happen or the cable would be accidentally disconnected the VDC Control Unit would entry on Error mode and the number 8 would show in the digital display.

To reset the equipment and resume the light values turn the switch power off, connect extension cable and switch on the power button.

COLOR TEMPERATURE Variation

Colour temperature can be easily increased or reduced through the +/- buttons located at the VDC Control Unit front panel. Above them a digital display indicates at all times the selected colour temperature. The value 3.2 corresponds to 3200K and the value 3.3 to 3300K and so on.

Push the + button to increase colour temperature or push the - button to decrease it. If you keep pushed any of the buttons the you will get a continuous variation.

NOTE:

Every push on the buttons will increase or decrease the colour temperature in calibrated increments of 100 Kelvin.

TURBO

By activating the TURBO button (a blue LED lights up on the screen of the Control Unit) maximum light output is achieved in the colour temperature selected and the value 9 will appear on the dimmer display.

DIMMER Light intensity variation

The dimmer of the VDC Control Unit is totally digital and guarantees the regulation of light intensity with minimal changes in the selected colour temperature.

Light intensity can be easily increased or reduced through the +/- buttons located at the VDC Control Unit front panel. Above them a digital display indicates at all times the selected dimmer value from a minimum of 1 to a maximum of 9.

Push the + button to increase light intensity or push the - button to decrease it. If you keep pushed any of the buttons the you will get a continuous variation.

NOTE: Every push on the buttons will increase or decrease the light intensity in calibrated increments of $\frac{1}{2}$ stop.

-/+ GREEN Green/magenta bias control

Green/magenta bias switch located at the VDC Control Unit front panel lets you easily alter the colour of the light emitting at any colour temperature towards green or magenta in increments of -/+ $\frac{1}{8}$ and $\frac{1}{4}$.

When this switch is not in the standard position a green LED light turns on in the VDC Control Unit to warn that the light emitted no longer guarantees the correct chromaticity.

NOTE: THELIGHT guarantees the correct colorimetry for light emitting from their high power LED light fixtures, calibrated in the laboratory according to current international standards of the CIE 13.3-1995 for the average CRI and the chromatic co-ordinates (x, y CIE-1931). This certifies that our luminaries have no green/magenta deviation.

NOTE: Full adjustment is possible in a range of colour temperatures from 3900K to 5800K. From 2800K to 3900K and from 5800K to 8500K the adjustment is possible only on $\frac{1}{8}$ and $\frac{1}{4}$ plusgreen.

6. DMX 512 CONTROL (only VDC Control Unit DMX)

THELIGHT lightning fixtures have been designed for a full DMX control from the 5-pin DMX port located at the back of the VDC Control Unit DMX.

Connect the DMX cable coming from your console into the DMX IN male connector located at the back of the VDC Control Unit DMX. Beside the DMX IN there is also a DMX OUT connector to daisy chain fixtures.

Addressing channels

Push both + and - COLOR TEMPERATURE buttons at the same time and then switch on the power button. Wait a few seconds for the three digital displays to blink.

Now you can define the start address. To do so just push the + or - DIMMER buttons to increase or decrease the first fixture address. Once you have chosen the desired address number push the TURBO button to save the selection.

Keep in mind the following points regarding DMX control:

- THELIGHT DMX protocol uses 3 channels per fixture
- After the DMX address is entered the Control Unit will automatically assign the following two channels.
- If you wish to control several THELIGHT fixtures at the same values you will have to set them to the same address.
- If you wish to control several THELIGHT fixtures independently you will have to offset their address by 3 channels. Example:

fixture1 address 001 – fixture2 address 004 – fixture3 address 007

DMX Channels

When you connect your console to the VDC Control Unit DMX you will be able to control THELIGHT fixtures through 3 channels:

- **Channel 1** (start address) – **COLOUR TEMPERATURE**
From 2.5 to 6.5 (from 2800Kelvin to 8500Kelvin)
Fader at 0 2.8 means 2800Kelvin
Fader at 100 8.5 means 8500Kelvin
- **Channel 2** (start address + 1)– **DIMMER**
- **Channel 3** (start address + 2)– **GREEN/MAGENTA correction**
fader at 0% -1/4 Green
fader at 25% - 1/8 Green
fader at 50% standard position (green/magenta at 0)
fader at 75% +1/8 Green
fader at 100% +1/4 Green

NOTE:

Do not use microphone cables or other general purpose two-core cables designed for audio or signal use. They are not suitable for DMX 512. Problems due to wrong cabling may not be immediately perceptible. Microphone cables may appear to work fine, but systems built with such cables may fail or be susceptible to random errors. Cable must comply with RS-485 DMX protocol (EIA485).

NOTE:

A DMX terminator should be plugged into the final, empty, OUT connector of the last slave on the daisy chain. A terminator is a stand-alone male connector with a built-in 120 Ω resistor, matching the cable characteristic impedance, connected across the primary data signal pair.

NOTE for Avolites consoles users:

THELIGHT luminaries DMX working personality can be configured to be recognised by Avolites consoles. Download the personality files to install into Avolites consoles from www.avolitesdownload.com/PersonalityLibrary/?mainPage=Main.asp&ID=3516

7. MECHANICAL ADJUSTMENTS

Beam angle variation

Hold the lamp head from the outer segments and bend it in or out to the wanted concave or convex shape. Choose the light beam angle you need and the lamp head will remain at the chosen setting. When the lamp head is positioned at standard flat setting the light beam angle is 35°. The maximum light beam angle is given when the lamp head is bend at its more convex setting.

Barn doors installation

Place the barn door axle into the external lamp head segment grooves. Then insert one end of the axle into the hole located at the lamp head exterior segment as shown in the picture. The right mounting position is achieved when the product name is visible facing outwards.

Insert the other barn door axle end into the opposite hole located at the lamp head exterior segment.

Quick link diffuser installation

To assemble the diffuser insert the four magnets in their respective holes to set-up a diffusion box as shown in the picture.

Position the lamp head in its standard flat setting.

Align the top diffuser box magnets with their respective screws located on the lamp head.

Do the same thing with the low magnets and their power will automatically fix the diffuser to the lamp head.

NOTE:

The diffuser softens and broadens the light beam, yet retains general beam shape with minimal colour temperature shift. Excellent for softening harsh edges. The transmission lost is 2/3 of a stop.

NOTE:

The diffuser has been designed so that when installed allows the lamp head to bend and focus the beam angle.

8. SPECIFICATIONS

4LIGHT

COLOUR TEMPERATURE	adjustable from 2800K a 8500K (with 100K increments)
LIGHT INTENSITY	dimmable with minimal colour shift (increments of 1/2 stop)
GREEN/MAGENTA BIAS	adjustable +/- 1/4 y 1/8 steps
CRI	90 from 2900K a 6500K
DIMENSIONS	339 x 207 x 71 mm
WEIGHT	2,4 kg
POWER DRAW	99W 28V (maximum 120W)
BEAM ANGLE	variable from 30° to 65° (standard 35°)
LED RATED LIFE	more than 50.000 hours
THELIGHT LED TECHNOLOGY	UME (Minimum Emitting Unit) made up of: 3 high-power LED with a selected BIN + Fresnel lens + CPU control with THELIGHT software
RIGGING OPTIONS	quick link swivel-ball head with 10mm pin, adjustable yoke
ACCESSORIES	quick link swivel-ball head with 16mm female, magnetic attach diffuser, removable barn doors, waterproof case

VDC Control Unit

DIMENSIONS	172 x 173 x 87 mm
WEIGHT	1,5 kg
POWER SUPPLY	9-36 VDC
OUTPUT FREQUENCY	20KHz flicker-free up to 3000fps still photography up to 1/6000 sec
FUSE	1 x 15 A
OPTIONS	Vlock or Gold battery mount
ACCESSORIES	hexagonal 16mm baby spud to mount on a stand, 5 or 10 meters extension cables

VDC Control Unit DMX

DIMENSIONS	292 x 173 x 87 mm
WEIGHT	2 kg
POWER SUPPLY	9-36 VDC
OUTPUT FREQUENCY	20KHz flicker-free up to 3000fps still photography up to 1/6000 sec
FUSE	3 x 15 A
OPTIONS	Vlock or Gold battery mount
ACCESSORIES	hexagonal 16mm baby spud to mount on a stand, 5 or 10 meters extension cables

[x, y CIE-1931]

Shown on the diagram are the THELIGHT lamp head chromaticity coordinates [x, y CIE-1931] feed and digitally controlled by its Control Unit and they are compared with the reference illuminants. These reference illuminants are the Planckian locus radiator set below 5000K and the CIE daylight reference is set over 5000K. The Planckian locus radiator references the chromaticity for several tungsten lamps colour temperatures while the daylight locus typify daylight type D illuminants.

The diagram evidence the light emanated by THELIGHT luminary at every colour temperature entirely matches with the described locus reference so that the colour of the light produced is essentially the same as incandescent and daylight. It is also remarkable the minimum green/magenta deviation over the locus reference along the range of colour temperatures [means minimal difference between THELIGHT chromaticity coordinates and the ideal reference line].

CALIBRATION

The Instrument Systems scanning spectrometer, model Spectro 320, serial number 30932004, with its accessory TOP-100 has been calibrated according to the United States National Institute of Standards (NIST) and the German Physikalisch-Technische Bundesanstalt (PTB) standard references.

ACCURACY

The Instrument Systems scanning spectrometer, model Spectro 320, serial number 30932004, with its accessory TOP-100 has an imprecision over the spectral radiometric results delivered lower than 1%.

24 fps / 500 ASA

4LIGHT						
5600K				3200K		
Lux	F-Stop	Fc	meters	Fc	F-Stop	Lux
5500	16	510	1	418	11.7	4500
740	5,6	69	3	56	4.8	600

Readings made with scanning spectrometer at stable temperature, Control Unit set at maximum light intensity (Turbo On and dimmer at 9 setting), lamp head at standard flat setting and measurement instrument positioned perpendicular over the luminary surface center.

CALIBRATION

The Instrument Systems scanning spectrometer, model Spectro 320, serial number 30932004, with its accessory TOP-100 has been calibrated according to the United States National Institute of Standards (NIST) and the german Physikalisch-Technische Bundesanstalt (PTB) standard references.

ACCURACY

The Instrument Systems scanning spectrometer, model Spectro 320, serial number 30932004, with its accessory TOP-100 has an imprecision over the spectral radiometric results delivered lower than 1%.

REGULATIONS

This equipment is designed to meet the following regulations and safety standards for battery powered technology equipment:

ENVIRONMENTAL

THELIGHT devices are certified and intended for indoor use (lamp head IP21, VDC Control Unit IP41)

LAMP HEAD OPERATION TEMPERATURE from -20° to +30° C

CONTROL UNIT OPERATION TEMPERATURE from -20° to +50° C

OPERATING HUMIDITY from 30 to 90% RH non condensing

FUSE 1 x 15 A

WARRANTY

THELIGHT high power LED light equipments are guaranteed to be free from defects in workmanship and parts in a warranty period of one (1) year from the date of purchase. Defects that occur within this warranty period, under normal use and care will be repaired or replaced at THELIGHT discretion, solely at our option with no charge for parts or labor.

In the event of the equipment malfunction, contact the dealer from which you purchased the product. Please note that you will be not be reimbursed for the cost of bringing the equipment to the THELIGHT Repair Centre.

THELIGHT reserves the right to replace the product or relevant part with the same or equivalent product or part, rather than repair it. Where a replacement is provided the products or part replaced becomes the property of THELIGHT. THELIGHT may replace parts with refurbished parts. Replacement of the product or a part does not extend or restart the Warranty period.

Returns or exchanges from the customers will be accepted within 15 days of delivery and will not include the actual shipping costs. Item(s) must be in original packaging and condition, must not be assembled, and must include its original user manual.

This warranty does not cover any damage resulting from:

- Failure to follow the instructions in the instruction manual;
- Repair, modification or overhaul not conducted by any authorized THELIGHT personnel.
- Fire, natural disaster, act of God, lightning, abnormal voltage, etc;
- Submergence in water (flooding), exposure to alcohol or other beverages, infiltration of sand or mud, physical shock, or dropping of the equipment and other unnatural causes.

This warranty only applies to the lamp head and the Control Unit and not to the accessories, such as the diffuser or barn doors, nor does it apply to the fuses and other consumables provided.

Any consequential damages arising from failure of the equipment, such as expenses incurred in taking pictures or recording images or loss of expected profit, will not be reimbursed whether they occur during the warranty period or not.

Parts essential to the servicing of the light equipment (that is, components required to maintain the functions and quality of the fixture) will be available for a period of five years after the product is discontinued.
